Figure 11. Description of calorie graph for user 7
Figure 12. Description of weight graph for user. 7

On the home page I added the graph to show where the user is currently at in their daily calorie intake. The graph will turn yellow when they are under 70% of their daily calorie intake. Green when they are between 70% and 100%. Thern the bar will turn red if they go over their recommended daily calorie intake.

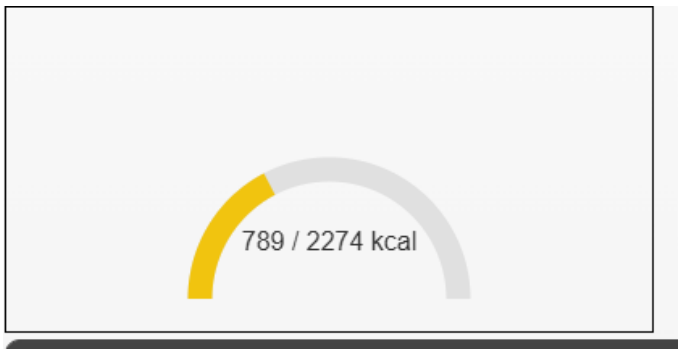

Figure 1. Yellow

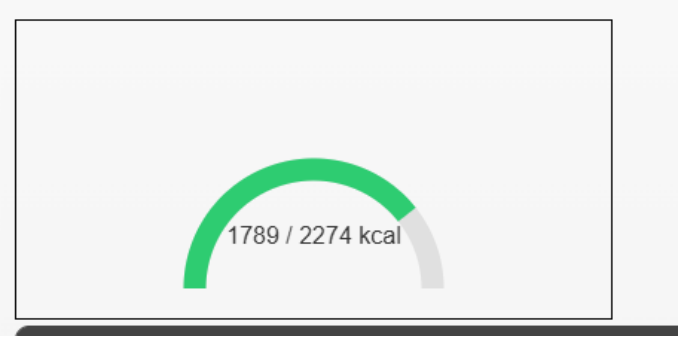

Figure 2. Green

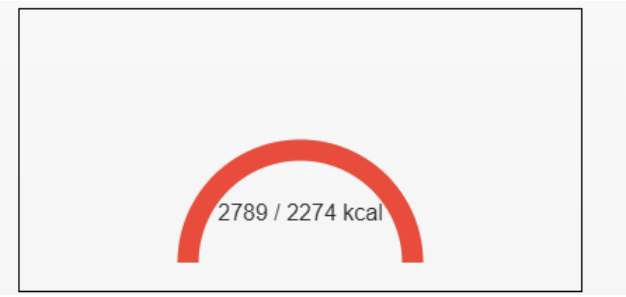

Figure 3. Red

I also added 3 new testing calories. These would not be present in the final app but are there to test out different parts of the graphs. I added a test for 500 calories, test for 1000 calories and lastly a test for 2000 calories. That way I was able to test the fidderent colors of the graph to make sure they are working.

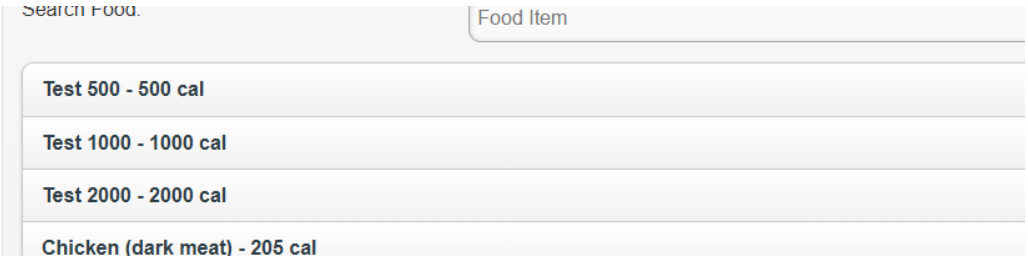

Figure 4. Test entries added to food list

After this I made the graph to show daily total calories of the user. I have one line representing the totals and a dotted line that represents the daily goal for calories

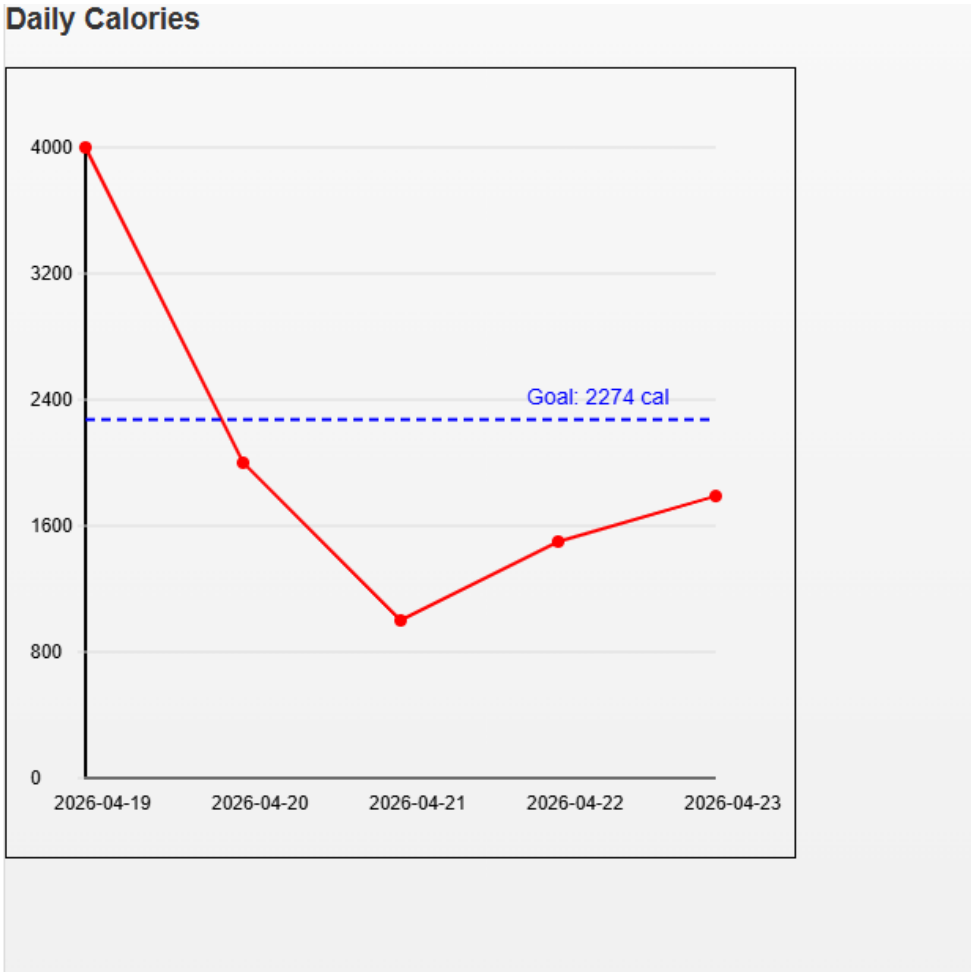

Figure 5. Calorie graph

Each dated is displayed with a dot and the line that connects the dot. I added a bunch of test calories in the history page to help simulated how this graph would function.

This will also state to the user if no records exist for the graph to display

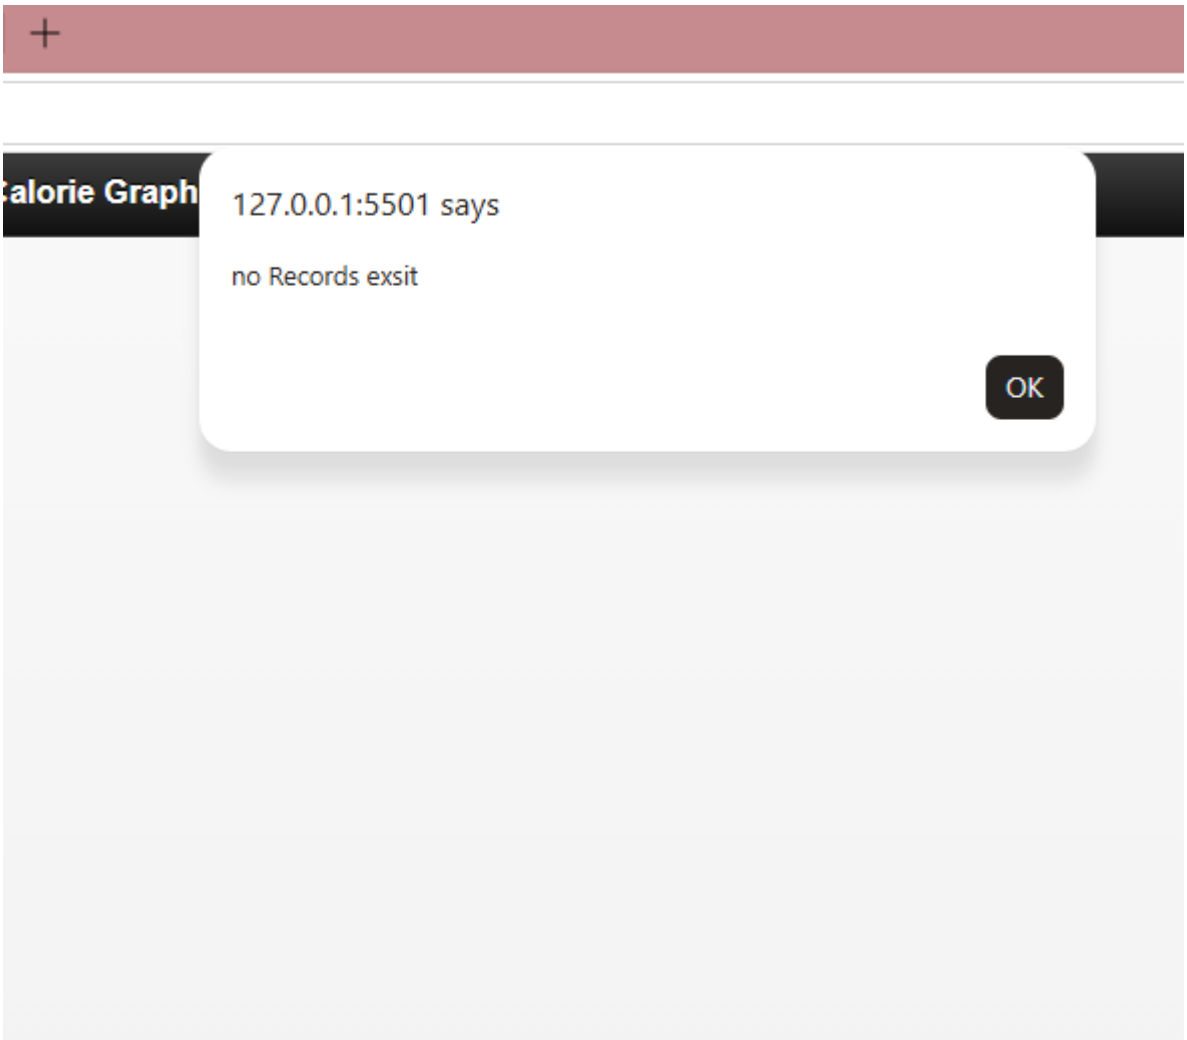

Figure 6. calorie graph alert if there are no records

I will be adding this to the weight graph as well. After this graph I created the graph for the weight entry to be displayed this will behave much like the Calorie graph although the weight goal will be below the current weights that are stored. So below is a screenshot of the weight graph page when no records are found

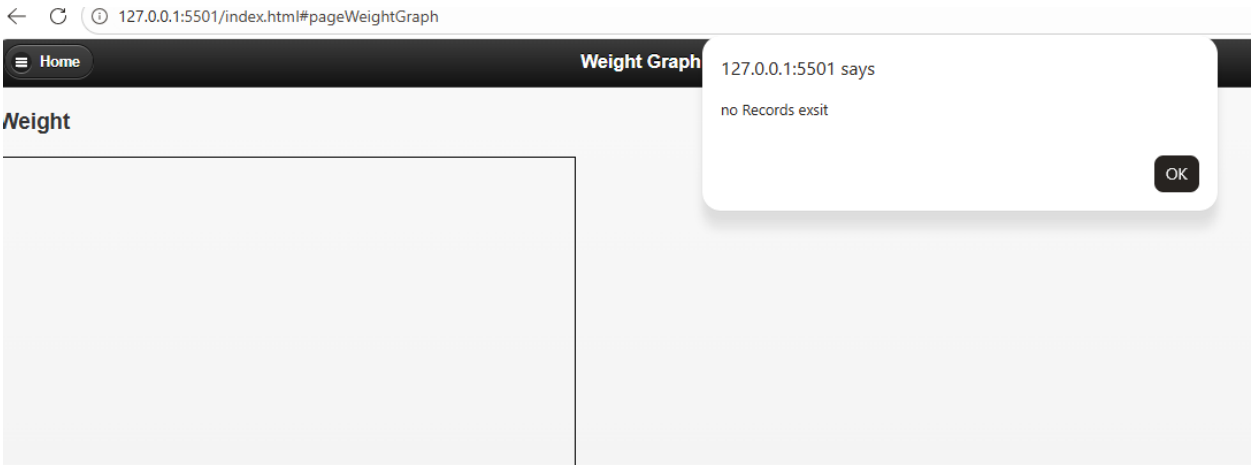

Figure 7. Weight graph alert if there are no records

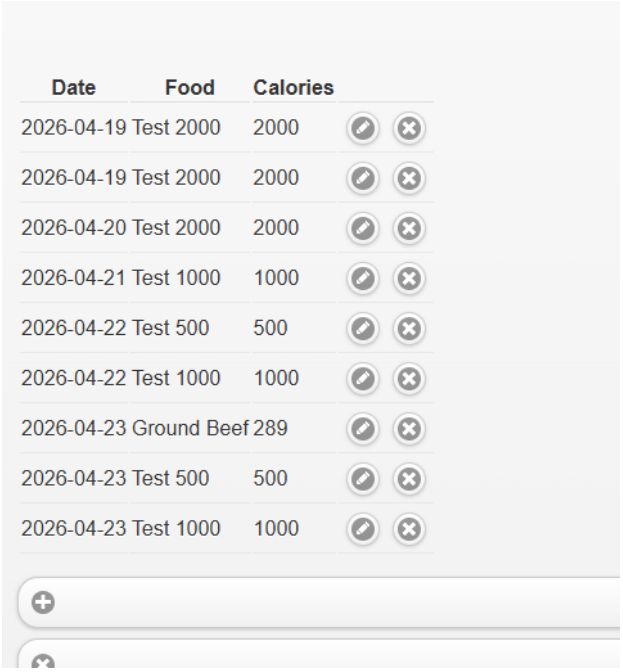
Much like the Calorie graph this will send the user back to the home page if there is no information to display.



Date	Food	Calories
2026-04-19	Test 2000	2000
2026-04-19	Test 2000	2000
2026-04-20	Test 2000	2000
2026-04-21	Test 1000	1000
2026-04-22	Test 500	500
2026-04-22	Test 1000	1000
2026-04-23	Ground Beef	289
2026-04-23	Test 500	500
2026-04-23	Test 1000	1000

Figure 8. Values that were added to test calorie graph

Here is the graph page I made for weight tracking and I added a bunch of weight entries to show how the graph behaves

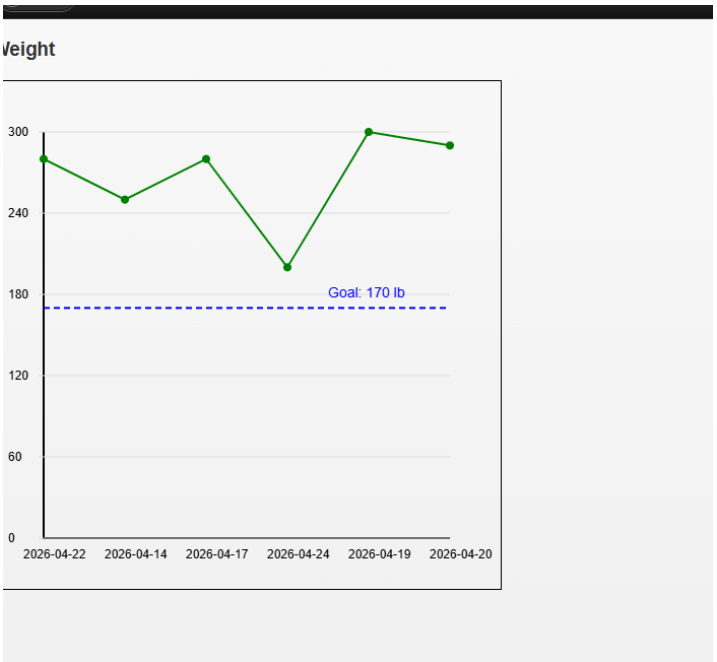


Figure 9. Weight graph

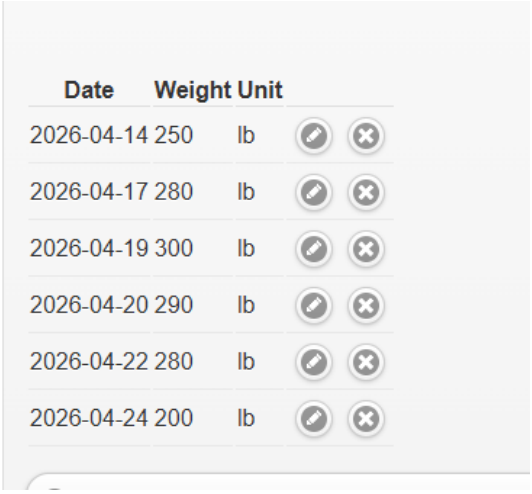

Date	Weight	Unit
2026-04-14	250	lb
2026-04-17	280	lb
2026-04-19	300	lb
2026-04-20	290	lb
2026-04-22	280	lb
2026-04-24	200	lb

Figure 10. Values entered to test weight graph

I also decided to give a description of what each graph does to the user below are the descriptions

Description

Graph displays both the goal calories and the total daily calories consumed.

The red line indicates the calories that have been consumed each day.

The dotted blue line is the recommended calories to consume to be able to achieve the goal weight.

Figure 11. Description of calorie graph for user

Description

Graph is used to track weight fluctuations that are happening or how close you are to your goal weight.

The Green line indicates the Weight that ahs been entered on different days.

The dotted blue line is the goal weight that you have set to acheive.

Figure 12. Description of weight graph for user.
